

Environmental Remediation Services

KU Resources has experience managing various types of environmental remediation projects, both construction-based and technology-based, for a wide range of clients. This project work has also involved project sizes ranging from single-day activities to multi-month projects with values exceeding two million dollars.

Using our expertise, specialty subcontractors, and state-of-the-art equipment and facilities, we offer our clients a diverse array of services to meet their remediation needs. Our clients work directly with our company, rather than several unaffiliated contractors. This approach allows us to provide customized solutions for our clients, while keeping close control over project deliverables, schedules, and budgets.

We are dedicated to developing innovative solutions for our clients, while providing maximum value to their project. Our broad experience base allows us to effectively critique existing remediation plans and suggest ways to improve project efficiency and reduce costs. On numerous occasions, our remediation approaches have saved clients both time and money.

Remediation Services

We have the experience and the expertise in the following environmental remediation services:
