ASBESTOS **SERVICES**

KU Resources has extensive experience in assisting clients in locating and assessing asbestos-containing materials in their facilities. We have an understanding of the regulations related to asbestos, as well as the risks associated with asbestos removal. Our personnel conduct asbestos hazard assessments following the Asbestos Hazard Emergency Response Act (AHERA) and the Nation Emission Standards for Hazardous Air Pollutants (NESHAPS), as well as State and local air authority protocol and regulations on a regular basis. Our protocol ensures statistically reliable data is verified by cross-referencing field data sheets, chain-of-custody forms, and field notes.

Our environmental professionals are specially trained and certified, and follow all applicable United States Environmental Protection Agency and Occupational Safety and Health regulations pertaining to assessment and remediation projects. We use only laboratories certified by the National Voluntary Laboratory Accreditation Program (NVLAP). These laboratories participate not only in the NVLAP but the American Industrial Hygiene Association (AIHA) Bulk Asbestos Sample Quality Assurance Program, as well.

We have completed numerous asbestos-related projects including building renovations, restorations, and demolitions. Our experience includes identifying, locating, assessing, and quantifying asbestos-containing materials and we have the capabilities to design specifications for effective removal plans and asbestos abatement clearance sampling. We work with a network of qualified asbestos contractors that are experienced in asbestos remediation including repair, encapsulation, and removal in compliance with the various regulations surrounding asbestos.

ASBESTOS SERVICES

- Site characterization and evaluation
- Facility structure evaluation
- Review of environmental documents
- Liability management
- Asbestos surveys
- Site reconnaissance
- Asbestos remediation, including repair and removal
- Operations and maintenance plans
- Preparation of environmental evaluation reports
- Design and bid specifications
